

PCI Geomatics Announces Upgrade to Geomatica Software

Richmond Hill, Ontario – July 27, 2010: PCI Geomatics, a world leading developer of geo-imaging software and systems, is pleased to announce the availability of an upgrade to Geomatica®, its remote sensing and image processing software. Version 10.3.2 is the latest release available, and it includes additional satellite sensor support in addition to enhanced functionality.

Satellites supported in this release include HJ-1A/B, the first 2 sensors of the Chinese Environment and Disaster Monitoring Microsatellite Constellation. Upgrades to the math modeling have also improved the overall accuracy of Radarsat-2 correction using the Toutin model with no GCPs; an accurate, alternative solution to the RPC model.

Additionally, Geomatica 10.3.2 includes upgrades to PCI Geomatics' existing ATCOR, atmospheric correction capabilities.

"With the release of Geomatica 10.3.2, we remain committed to providing customers with the best satellite sensor support available, as we continue to meet their remote sensing and image processing needs," said Peter Hazlett, Product Manager at PCI Geomatics.

Both Windows and Linux editions of Geomatica 10.3.2 are available.

For more information on the new features found in Geomatica 10.3.2, please visit www.pcigeomatics.com/updates.

About PCI Geomatics

PCI Geomatics is a world leading developer of software and systems for geo-imaging solutions. Since 1982, we have specialized in remote sensing, digital photogrammetry, spatial analysis, cartographic production, automated production systems, image management and on demand mapping solutions. PCI Geomatics' advanced software systems address a wide variety of industry applications including the environment, agriculture, security and intelligence, aerospace & defense, and satellite receiving stations. We have the expertise and know-how to turn images into useful information.
