

Cartosat Model ProPack

CARTOSAT PROPACK

The Cartosat Model ProPack extends the functionality of the PCI ProSDK. This Propack includes the CDCARTOSAT PPF (PCI Pluggable Function) that imports image and geometric data directly from CARTOSAT-1 data product distribution files. This is required for the orthorectification of these data products.

Data management PPFs are included in this ProPack.

SOME OF THE INCLUDED COMPLEMENTARY PPFs

Data Management

- IMERGE
 - Merges multiple geocoded rasters into a single raster file.
- REPROJ
 - Reprojects images, bitmap segments and vector layers to a specified projection.
- CLIP
 - Clips layers based on a user defined clip region.
- TILE
 - Creates multiple subset tiles from a single file.
- PYRAMID
 - Builds an image pyramid for one or more image layers in a data file.
